Self-description

One of the biggest lessons from these working years is that except skills required for the applied position,

communication and documentation skills are also important. The experience is briefly summarize as follows

1. Testing experience

Attend 5 projects testing work totally , mainly focus on manual testing include App、Mini Program and Web, also participate in the both UI and API automation test as a beginner. Small touch with CICD and Jenkins in daily work, Have the sense of Docker and K8S.

2. Retro

Testing is about quality control ultimately

All team members should have the sense of quality control and it's not only QA's responsibility.

QA Team had better do research about tools for testing and push it into team which the best way to improve team efficiency.

3. Project Management Experience

Participated in project management of 4 projects, comprehension about the Project Management as follows

Project manager need have a strong sense of how to keep balance among the cost、scope、time, these three elements are influence and correlate with each other which have great impact on product quality.

Risk Management : Project manager request to realize risks timely in the process of project and formulate risk mitigation strategies or response strategies. it will influence the quality and delivery

Communication skills-nonviolent communication: keep to update any changes with team timely and have instant communication internal or external

Additional Information

PMP : Certificated Project Management ;

CSM : Certificated Scrum Alliance
